GENERAL CONDITIONS

GENERAL CONDITIONS OF DELIVERY AND PAYMENT

General conditions of sale, delivery and payment of Interfield Sports B.V. of Katwijk, in the Netherlands.
All prices in euro. All prices under proper reserves.

Article 1: Applicability of these conditions.

- 1.1 All proposals shall be made with the declaration that these general conditions of sale, delivery and payment shall apply both to the proposal and the acceptance thereof, and to the agreement thus established.
- 1.2 General conditions (of purchase) of the client shall only apply where it is expressly agreed in writing that these apply with the exclusion of these conditions of supply to the agreement between parties.

Article 2: Proposals, quotations.

- 2.1 All proposals shall be without obligation unless these contain a period for acceptance. Where a proposal contains an offer without obligation, we shall have the right to revoke the offer within two working days of receipt of acceptance.
- 2.2 In case of composite price quotations there shall be no obligation to deliver a part for the corresponding part of the price indicated for the whole.
- 2.3 Where reservations or modifications with respect to the proposal are included in the acceptance, as an exception to the provisions of Article 2.1, the agreement shall only come into being where we have notified the client that we agree to these deviations from the proposal.
- 2.4 If no order is placed after the proposal requested, the costs of this may only be charged where this has been agreed.
- 2.5 For additional and extra work for which no price has been agreed the price to be paid shall be calculated on the basis of costing.

Article 3: Prices and price changes.

- 3.1 All prices indicated shall be exclusive of value added tax (VAT) and other levies imposed by the Authorities.
- 3.2 The price which we indicate for the service to be performed shall only apply for such service and not for the dispatch and transport costs etc.
- 3.3 We shall be entitled to increase the agreed price if one or more of the following circumstances occur after signature of the agreement: increase in the costs of materials or services which are necessary for the execution of the agreement, increase in dispatch costs, wages, employer's charges and social security contributions, in the costs involved in other conditions of employment, introduction of new and increase in existing government levies on raw materials, energy or waste, an appreciable change in foreign exchange rates or, in general, circumstances which are comparable with all these.

Article 4: Delivery method; reservation of ownership.

- 4.1 Unless otherwise agreed delivery shall be made to the place where we carry on our business.
- 4.2 We shall not be obliged to carry out delivery in parts.
- 4.3 The client shall be obliged to give his full cooperation to the delivery of the goods to be supplied by us in accordance with the agreement. The client shall also be in default without being given notice thereof where he does not collect the goods to be delivered from us after our first request or where a delivery to his address is agreed, he refuses to take receipt of the goods.
- 4.4 Any delivery of goods by us to the client shall be made on reservation of title thereof, until the client has paid everything to which he is obliged under the agreement, including interest and costs.
- 4.5 Where transport of the goods to be delivered is agreed, this shall be for account of the client, unless free delivery has been agreed. The client shall only bear the risk during transport. The acceptance of goods from us by the carrier shall be deemed evidence that these are in an externally good condition, unless the contrary is shown by the consignment note or the receipt.
- 4.6 We shall not be responsible for the storage of the goods to be delivered, unless this is expressly agreed. Where storage is carried out, this shall be for account and risk of the client.

Article 5: Delivery period.

Delivery periods indicated shall never be regarded as deadlines, unless otherwise expressly agreed. In case of late delivery we must therefore be given written notification of default.

Article 6: Partial delivery

Any partial delivery, including also the delivery of components of a composite order, may be invoiced. In such case payment must be made in accordance with Article 8 'terms of payment'.

Article 7: Check upon delivery.

- 7.1 The client shall be obliged to check with appropriate speed after delivery whether we have satisfactorily fulfilled the agreement and shall also be obliged to notify us immediately in writing, should he find the contrary. The client must carry out the check just mentioned and give the relevant notification at the latest within 24 hours of delivery.
- 7.2 We shall always be entitled to provide a satisfactory new service in place of a previous unsatisfactory service, unless the default cannot be remedied.
- 7.3 The fulfilment of the agreement shall be regarded between parties as satisfactory where the client has been in default of promptly carrying out the check or the notification as referred to in paragraph 1 of this Article.
- 7.4 Where the period of 24 hours referred to in the first paragraph of this article in accordance with criteria of reasonableness and fairness must also be regarded as unacceptably short for a careful and alert client, this period shall be extended at the latest until the first time when the check or the notification given to us by client is reasonably possible.
- 7.5 Our service shall in any case be regarded between parties as satisfactory where the client has taken into use, treated or processed, or delivered to third parties the goods delivered or part of the goods delivered or had them taken into use, treated or processed or delivered to third parties unless the client has taken into account the provisions of the first paragraph of this article.

Article 8: Terms of payment.

- 8.1 Payment must be made upon delivery in cash, unless otherwise expressly agreed in writing.
- 8.2 Where a discount for cash payment is agreed, this may only be deducted from the invoice amount where paid within the agreed period and where at the time of the application of the discount there are not any other unpaid invoices.
- 8.3 From the due date the client shall owe interest on the invoice amount of 1% per month or part thereof.
- 8.4 The demand for payment of the purchase price shall be immediately payable if the client is declared bankrupt, applies for suspension of payment, an application for placing under restraint is pending, any attachment is made on goods or receivables of client, client dies or where this is a partnership, a private limited company or a public limited company, it goes into liquidation, is dissolved or acquires another partner.
- 8.5 Where the client is in arrears with any payment - even where this is the result of another agreement - then all amounts to be paid by him to us shall be payable up to the full amount, irrespective of the status of the orders and we can demand immediate payment thereof. In that case the execution of any order given by this client is to be suspended until payment is made within a period to be set by us which has become payable in case of the previous sentence. Where payment has not been made within this period, we shall be entitled to cancel all orders of that client, notwithstanding all rights to compensation as provided in case of 'cancellations' in Article 10.
- 8.6 Any suspension of payment granted may be withdrawn by us at any time.
- 8.7 A payment is regarded as received once the amount in question has been credited to the account indicated or has been handed over in cash.
- 8.8 A payment made by the client shall always cover all interest and costs owing and then invoice payable which have been outstanding the longest, even where the client indicates that the payment relates to a later invoice.
- 8.9 All costs, both extrajudicial and judicial, including the costs for solicitors, bailiffs and collection agencies, incurred with regard to the collection of the amount payable by the client and not paid promptly shall be for account of the client. They shall be fixed at a minimum of 15% of the amount in question and shall amount to at least NLG 250.

Article 9: Retention right.

We shall be entitled to hold onto the goods of the client on our premises until payment of all costs which we have incurred to execute orders from this same client, unless the client has provided sufficient surety for these costs. We shall also have the retention right where the client becomes bankrupt.

Article 10: Cancellations.

Where the client cancels the order given in full or in part, he shall be obliged to reimburse us for all costs already incurred with a view to the execution of this order and, where we wish this, to take the goods intended for the execution of this order for his account at the prices included by us in the costing. This is all notwithstanding our right to remuneration for loss of profit as well as the other loss arising from the cancellation involved.

Article 11: Force majeure.

- 11.1 The delivery period referred to in these conditions shall be extended by the period during which we are prevented by default which cannot be attributed to us - further indicated by force majeure - from fulfilling our obligations.
- 11.2 There is a question of force majeure on our part where after signing the purchase agreement we are prevented from fulfilling our obligations arising from this agreement or preparing for them as a result of war, danger of war, civil war, revolt, war risk, fire, water damage, flooding, strike, occupation, lock-out, import and export barriers, government measures, faults in machinery, disruptions to the energy supply, all both in our company and at third parties, from whom we have to obtain all or part of the goods required, as well as in case of storage or during transport whether or not under our own management, and also by all other causes which arise through no fault of ours or outside our sphere of risk.
- 11.3 Where the delivery is delayed by force majeure for more than fourteen days, both we and the client are empowered to regard the agreement as terminated. In that case we shall only have a right to reimbursement of the costs to be incurred by us.

Article 12: Liability.

- 12.1 Our liability under the agreement with the client shall be limited to an amount proportionate to the agreed price in accordance with criteria of reasonableness and fairness.
- 12.2 We shall not be liable for damage of any type whatever which arises because or after the client has, after delivery, taken the goods into use, treated or processed them, delivered them to third parties or had them taken into use, treated or processed or delivered to third parties.
- 12.3 We shall also not be liable for loss in the form of loss of profit or reduction in goodwill in the company or the profession of the client.
- 12.4 Where we are held liable by a third party for any damage for which we are not liable by virtue of the agreement with the client or these conditions of delivery, client shall indemnify us in full from this and reimburse us for everything that we have to pay to this third party.

Article 13: Applicable law and disputes.

- 13.1 Only Dutch law shall apply to the agreements between us and the client.
- 13.2 All disputes between parties shall be settled by the competent Court in the district in which we are established.
- 13.3 We shall however remain authorised to summons the client before the court competent in accordance with the law or the applicable international convention.

Wetsuits, Metalite & Lycra's

Evolution never stops, as reflected in our wetsuits, better materials, new techniques and approved constructions. Our wetsuits are warmer, more flexible, more durable and packed with new features. All is based on rider's input, knowledge of materials, construction, design and moving your butt around in water.

For the 2006 wetsuits we approved our wetsuits on 3 main areas;
Neck Construction, Arms & Armpits, and the ratio between warmth and stretch.
To achieve our goals we used new materials, constructions and techniques.

So is for example, the neck redesigned to ensure more comfort. And for the armpits we used better materials and new panel layouts. New neoprene foams and -linings are used to create a better ratio between warmth and stretch, and new techniques are used for stronger constructions.

MATERIALS

Flame Skin: Flame skin is a killer; it's a new developed neoprene with all the characteristics you need to battle your local elements.

It's a closed cell neoprene, flexible like seaweed, strong as a great white, smooth as a fin cutting through the water and above that lightweight as spray mingled with air (that means 25% off).

Boil Skin: Experience what your Sunday morning egg does!

Boil skin is based on a closed cell neoprene with heat reflective titanium between the cells and the lining. The lining itself is hydrophobic and is able to stretch in all directions. This leads to a technically packed fully topped neoprene sandwich.

TRI Span: This lining has multiple advantages.

Most noticeable is the stretch capability. For example a 3mm TRI Span arm panel can easily stretch up to twice its original length. Furthermore the lining is made more durable by cross weaving, is therefore able to stretch evenly in all directions and feels soft on the skin.

SkyFlex Neoprene: Last years 'top of the bill material' still rules in our suits. This lightweight closed cell neoprene has extreme flexible lining.

AirFlex Neoprene: The best ratio between stretch and durability, like chewing gum with armour.

DuraFlex Neoprene: Has good adapting abilities, is comfortable to wear and is durable like queen Elizabeth.

Airprene Neoprene: Airprene is perforated neoprene with Flexible lining on both sides. Small perforations in the neoprene make it possible to drain picked up water.

ThermoSkin: ThermoSkin has superior moisture transportation characteristics, it's breathable quick drying, heat retentive and on top of that it's resistant to 'surf' aroma's.

Metalite neoprene: The metal coating on the neoprene surface at the inside of the underwear is a heat retentive coating that significantly improves insulation. The second advantage is the great flexibility of the neoprene which is very comfortable to wear.

Advanced titanium: All steamers in our collection have a titanium coating that significantly improves insulation (up to 25%!).

METHODS

Heat Seal: Heat-sealed seams are a flexible rubber connection between the panels. A heat seal has good flexibility, is strong and waterproof.

Heat Seal

Blindstitch Technology: Before the pieces are stitched together, they are 2 or 3 times glued. To prevent leaking stitching holes this stitching method penetrates only half of the neoprene thickness. This ensures a flat and waterproof seam.

Blindstitched

3x GLUED & BLINDSTITCHED

2x GLUED & BLINDSTITCHED

Twinlock Technology: A flat seam, that overlaps two pieces of neoprene creating a strong and rash free construction. Twinlock seams are less visible and therefore less vulnerable. Twinlock seams are used on most of our summer wetsuits.

Twinlock technology

TWINLOCK TECHNOLOGY

TECHNICAL FEATURES

- 1 Ribcage Heatcover
- 2 Sandwich Neck Closure
- 3 Low Fit Neck
- 4 Heat Sealed Seams
- 5 Active Arm Construction
- 6 Aquaflush Legpanel
- 7 Cross Knee
- 8 Heat Sealed Back Up
- 9 Water Relieve Hole
- 10 Splitline Zipper
- 11 Parabolic Cuffs
- 12 Key Pocket

TECHNICAL FEATURES

ribcage heat cover

Ribcage Heat Cover: The Single lined Flame skin is constructed around the ribcage on the front- side- and back, giving warmth where muscles are less present and the lungs are superficial. Area's where more flex is prohibited are kept free to use TRI span and thinner Flame skin.

sandwich neck closure

Sandwich Neck Closure: The construction of this collar covers all Velcro completely with soft neoprene. However you twist or bend your head this neck closure will always feel soft and comfortable.

low fit neck

Low fit neck: The front of the neck is slightly lower and has a pre shaped curve around the throat to keep the 'Adam's apple' free.

heat seal

Heat Seal: Heat-sealed seams are a flexible rubber connection between the panels. A heat seal has good flexibility, is strong and waterproof.

active arm construction

Active Arm Construction: A new arm and armpit construction combined with flexible and comfortable TRI span, Flame Skin or Skyflex neoprene. Less seams and pre located, curved seams ensure more comfort and flexibility.

aquaflush legpanel

Aquaflush Leg Panel: To let out picket up water, we've added a water permeable Airprene legpanel on the inside of the lower leg.

cross knee

Cross Knees: Pre-Shaped self-centring knees covered with PU-printing. Designed for maximum comfort, range of motion and durability.

back-up

Back up: This is an extra neoprene layer behind the zipper. If water penetrates the suit the back up will guide it out trough the water relieve hole.

split line zipper construction

Split Line Zipper Construction: The zipper is locked up as much as possible on the inside of the back panel. This results in less water penetrating the zipper and less heat loss due to a chilled surface around the zipper.

thickness

Thickness: In our wetsuit range we have the right combination of neoprene thicknesses for every condition.

ultra heatshield

Ultra Heatshield: In our warmest wetsuits we placed the right material in the right place to establish superb warmth. Take for example the PLC chest panel with plush laminated coated nylon.

harness system

Harness System: The harness system exists of a highly frictional waist panel to keep your harness low and in place in any condition.

backup zipper closure system

Back Up Zipper Closure System: This closure system behind the zipper prevents water from penetrating into the suit.

water relieve hole

Water Relieve Hole: If water penetrates the zipper the backup system guides it straight out of the suit through the water relieve hole.

aquablock flap

Aquablock Flap: An extra layer of neoprene behind the zipper.

uv-sunshield

Sunshield: Lycra bodywear prevents you from sunburn in the shiniest conditions. The Uv Protection Factor (UPF) is 50+.

VIRUS STEAMER D/L 5/3

VELCRO LEGSTRAPSET

- One size
- For lower legs

Art. no. 61820

Neoprene Accessories

MATERIALS

TRI SPAN

TRI Span: This lining has multiple advantages. Most noticeable is the stretch capability. For example a 3mm TRI Span arm panel can easily stretch up to twice it's original length. Furthermore the lining is made more durable by cross weaving, is therefore able to stretch evenly in all directions and feels soft on the skin.

SKYFLEX NEOPRENE

SkyFlex Neoprene: Last years 'top of the bill material' still rules in our suits. This lightweight closed cell neoprene has extreme flexible lining.

AIRFLEX NEOPRENE

AirFlex Neoprene: The best ratio between stretch and durability, like chewing gum with armour.

DURAFLEX NEOPRENE

DuraFlex Neoprene: Has good adapting abilities, is comfortable to wear and is durable like queen Elizabeth.

METHODS

Blindstitch Technology: Before the pieces are stitched together, they are 2 or 3 times glued. To prevent leaking stitching holes this stitching method penetrates only half of the neoprene thickness. This ensures a flat and waterproof seam.

Blindstitched

3x GLEUED & BLINDSTITCHED

2x GLEUED & BLINDSTITCHED

Twinlock Technology: A flat seam, that overlaps two pieces of neoprene creating a strong and rash free construction. Twinlock seams are less visible and therefore less vulnerable. Twinlock seams are used on most of our summer wetsuits.

Twinlock technology

TWINLOCK TECHNOLOGY

TECHNICAL FEATURES

CLEAN INSTEP

Clean Instep: A rubber-covered seam replaces the Velcro on top of the shoe. This makes the instep clean and smooth. A seam instead of the Velcro gives more feeling, comfort and a better fit in a foot strap. When paddling, the clean instep prevents a tangled board leash. The rubber seal works in a similar way as a Velcro closure. When it's stretched it locks around the feet.

COVERED DRY SEAMS

Covered dry seams: To make our seams even more unwilling to let water in we covered them with a firm layer of PU material.

HEEL STABILIZER

Heel stabilizer: For a stable non slipping stance on your board.

DURAGRIP SOLE

Duragrip sole: Extra durable, maximum feeling and control on your board. The twister sole is assembled out of 3 pieces for even better performance.

SPLIT TOE INSIDE

Split Toe Inside: The internal split toe provides an extreme stable non slipping stance.

MYSTIC BOOT

THE MOVEMENT MITTEN

When you generate force, your knuckles will move together, the more your fingers are bend. Because of the shape of the joints in your hand and fingers this is inevitable. Because of this it's hard to keep a powerful grip if you wear gloves with lots of material in between the fingers. In this case you are squeezing the material between your fingers rather than holding your bar or boom. To compensate this loss you will have to use more strength. This will result in 'muscle fatigue' in the underarms (lots of surfers will recognize this problem when wearing gloves).

To minimize this 'strength' compensation we designed the Movement Mitten. To prevent material to 'bulk'-between the fingers we combined the ring-, little- and middle finger into one shape. The palm of the mitten is pre-curved and made of thin material with durable PU-printing on top.

To add warmth and reduce Wind-chill, the top of the glove is made of thicker, flexible single lined FlameSkin. The material works best here because arteries and veins are located superficial on the top of the hand. With less muscles or skin on top, this is normally a location for heat loss.

Harnesses & Parts, Impact jacket

Mystic's harness philosophy is clear. Based on up to date analyses we set our goals on excellent freedom of movement and harness construction. To ensure 'comfort' is the fundament on which our Kinetic Technology is build.

Analyses of forces and movements play the main role in our design philosophy.

The results are an essential contribution to our designs. They give us the information to come up with progressive designs on Harness construction, freedom of movement and load distribution.

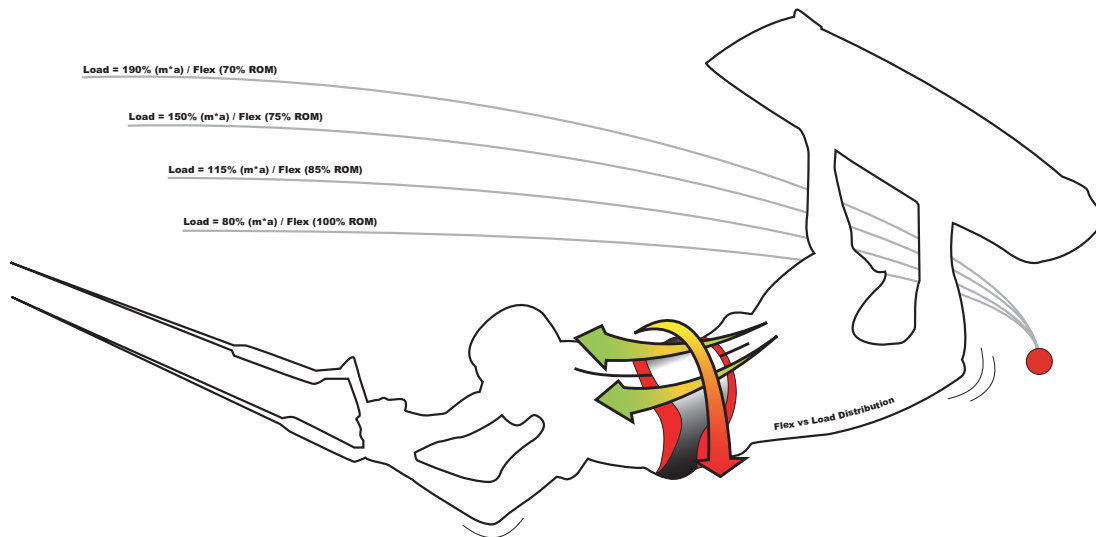

For 2006 our harnesses adapt to the needs of modern Kiteboarding and Windsurfing. This is reflected in the renewed Warrior Harness and the Warrior Windsurf Harness.

For the Kiteboard harness series we went on with our Kinetic Technology. New tricks, styles and rider information are again the input in our analysis. All is done to improve rider's action, comfort and harness construction.

After last year's introduction of Kinetic Technology with force analysis, freedom of movement and load distribution, we took a special look at the harness characteristics in unhooked riding for this year. Although it sounds a bit odd, the harness specifics are very important when performing unhooked tricks.

For unhooked tricks you need freedom of movement. The harness should not reduce the normal Range Of Motion (ROM). To guarantee unrestricted ROM we wanted to create more, so called 'Flex' in the harness. The design challenge was to create more flex without making concessions on Load Distribution, although Flex and Load Distribution are strong correlated. The solution to a good ratio between Flex and Load Distribution lies in construction and choice of material.

The Principle to generate a flexible harness for tricks, and good load distribution for comfortable overpowered riding, is to generate more 'stiffness' as the force on the harness increases. We enclosed this principle in our harnesses by flexible load distributing pre-shaped plates; in combination with stiffer glass fibre battens. The Battens reduce the degree of freedom when the force on the harness is big, giving more support. With less force on the harness it turns into a comfortable flexible piece that stay's in position.

| 1 KM ³ | 5 (Double) Power lease ring | 9 Safety Knife |
| 2 SDS-waist | 6 Thermo moulded foam | 10 Handle Pass Safety System |
| 3 Flex edge | 7 Battle Belt | 11 QR-Closure |
| 4 H-flex Force Frame | 8 Spreader Protector | 12 Kite Spreaderbar |

TECHNICAL FEATURES ON HARNESSSES

H-flex Force Frame: The 'H' in this force frame is formed by 3 Fiberglas battens.

2 slightly angled vertical ones and 1 horizontal. The vertical battens ensure a perfect harness shape and thus good load distribution during hooked sessions. When you 'pop' unhooked tricks the vertical battens 'flex' around the axis of the horizontal batten adding comfort. The horizontal batten also keeps the backside of the harness stiff when there's load on your handle pass leash. So when you crash you'll be still 'in' your harness rather than squeezed 'in between' your harness. A thicker but more flexible plastic plate forms the base of the force frame. All together, freedom of movement, comfort and load distribution are set to a higher level.

Handle Pass Safety System: Standard on the warrior kite harnesses is a handle pass safety system.

A nylon tube with elastic band and a dyneema rope is connected to a leash ring on 1 side. On the other side there's a quick release mechanism connected to the spreaderbar. With the handle pass leash connected around the nylon tube you can dump the kite in case of emergency by releasing the Handle Pass Safety System. In case of missing the bar the elastic band inside the tube devides the force evenly on the harness. When the elastic belt is at the end of its stretch the dyneema rope takes the load.

Battle Belt: This waist belt is secured on the frame on the inside of the harness.

The stretch in the belt makes your harness feel comfortable from the moment you putt it on.

The Velcro on the battle belt is positioned in such a way that it won't damage your suit, lycra or skin.

This redesigned knife is a new standard in safety. It can cut trough ropes up to 6mm quite easily.

It's completely made of stainless steel and due to its shape it has a firm grip and can it be used with gloves on.

Kinetic Back Support KM3: In our top model we put extra effort in our kinetic back support system. We combined the advantages of thermo moulding and neoprene. The mould is filled with bending lines to let the harness adapt to the continuous altering of the human body. The soft neoprene is a serious contribution to comfort, especially combined with the flex edge.

Kinetic Back Support: In our moulds and pre-stitched foam panels we combined the right foam density with the right pattern. In this way the inside of the harnesses gives you support in the most inverted positions, when just cruising and even when crashing hard. Whether you are a radical pro or a deep-seated local, you will notice the comfort of our kinetic back support.

SDS-Waist: This feature appeared straight out of our kite force analysis. There's no other way in protecting your ribs then holding down the spreaderbar. The Spreader Down System really locks the spreaderbar down, giving you more control while doing your manoeuvres. In high kite positions the system activates a side-to-side force chain preventing the harness from riding up. For the SDS-waist we combined the feature with an extra spreaderprotector for even more comfort.

Flex Edge: While grabbing your board and boning out your trick's, the ribs encounter the harnesses edge. Therefore this edge should be designed with the human kinetic technology principle and with the form of the rib case in mind. By doing so we introduce the flex edge. The sides of the harness are more flexible on points where the load distribution allows it, as a result the flex edge gives you more freedom of movement and painful ribs are history.

Twinbatten Load Distribution Frame: We built in a very active load distribution principle. The HKT system learned us that some parts of the body can handle pressure better than other parts. For example the harness comes across bony parts, muscles, arteries, veins, nerves etc. The internal twinbatten load distribution frame actively coordinates the distribution of the load around these parts of the body.

(Double) Power Leashring: This gives you the ability to split the force on the leashrings in half, while the ring itself is secured to the strongest part of the harness.

Impact Shield: For our impact products we used a layer construction of polyester 600D, dual density foam mesh and PE plate. The shield increases the impact surface to minimize the big bang on your body.

Reverse Force Seat Part: To ensure that riding up of the seatpart will not happen. We created the reverse force seat part. This is a unique feature straight out of our HKT analyses. If the seat part is pulled up it's pulled down at the same time. Therefore it stays where it should be.

Thermo Moulded Foam: By using the process of thermo moulding we are able to add the characteristics we needed for comfort and looks.

WARRIOR WAIST HARNESS

The developed Warrior has a new interior. New structure and new material give the harness the comfort for riding overpowered and the flexibility for new school tricks.

With the handle pass system and the secured leash rings it's a perfect 'Wake Style' Harness.

WARRIOR WAIST **WINDSURF** HARNESS

New in the harness range is the Windsurf version of the Warrior Harness. This style has it's own characteristics. It's specified on windsurfing with its structure and load distribution principles based on last years Warrior Harness. The Warrior windsurf version comes with a 'standard hook' a key pocket instead of a safety knife and without leash rings.

VIRUS WAKEBOARD VEST

The Virus Wake vest is completely built of the finest neoprene, this 'black gold' ensures a perfect & comfortable fit. The chest panel is made of moulded rubber.

It's shape and thickness creates a solid impact border. With foam and neoprene underneath, the chest panel has enough flexibility left for ribcage movements.

The 'injury exit shoulder straps are a build in 'airbag' for the shoulders. Arm and shoulder injuries are a common thing in wakeboarding. In case of injury on the upper body, the shoulder straps can be opened up completely so you don't have to painfully put the vest out over the head or cut the vest in pieces. Detachable plates inside the chest and back create a bigger impact surface, because they distribute the load evenly over the foam underneath.

This results in less impact force on the body. On the front side this provides extra protection to the liver, kidney and reduces 'gasping for air' after a crash on the stomach. The plates can be removed to add more flexibility to the vest. Holes in the mesh on the lower edge let out picked up water to reduce extra weight.

Flexible Neoprene Impact Vest: The Virus Wake vest is completely built of the finest neoprene, this 'black gold' ensures a perfect & comfortable fit.

Moulded Chest Cover: The chest panel is made of moulded rubber. It's shape and thickness creates a solid impact border. With foam and neoprene underneath the chest panel has enough flexibility left for ribcage movements.

Detachable Load Distribution Plates: Detachable plates inside the chest and back create a bigger impact surface, because they distribute the load evenly over the foam underneath. This results in less impact force on the body. On the front side this provides extra protection to the liver, kidney and reduces 'gasping for air' after a crash on the stomach. The plates can be removed to add more flexibility to the vest.

WATER RELIEVE MESH

Holes in the mesh on the lower edge let out picked up water to reduce extra weight.

INJURY EXIT SHOULDER STRAPS

The 'injury exit shoulder straps' are a built-in 'airbag' for the shoulders. Arm and shoulder injuries are a common thing in wakeboarding. In case of injury on the upper body the shoulder straps can be opened up completely so you don't have to painfully put the vest out over the head or cut the vest in pieces.

SAFETY KNIFE

Art. no. 69250

- Includes a small punch to mount on any harness
- Cuts lines and webbing
- Stainless steel blade
- Not Rustproof

EMERGENCY HAND KNIFE

Art. no. 69253

This redesigned knife is a new standard in safety. It can cut trough ropes up to 5 mm quite easily. It's completely made of stainless steel and due to its shape it has a firm grip and can it be used with gloves on.

HANDLEPASS LEASH WITH PROTECTOR

Art. no. 69108

- Thick Protection Padding
- Leash doesn't get stuck around the spreaderbar hook that easy.
- It's very easy to get back to the bar (after missing the handle pass) by grabbing the leash on the padding.
- The padding can't get over the buckle
- Neoprene covered buckle.
- Dyneema rope inside.
- Heavier Metal QR-pin.

HANDLEPASS LEASH

Art. no. 69106

- Stainless steel buckle
- Quick release

KITE SPREADER WITH PROTECTOR

- Rib protection pad
- Kite spreaderbar

KITE SPREADERCOVER

Size S/M L/XL
Art.no. 28275 28276

- Rib protection pad
- Kite spreaderbar
- Fits all spreaderbars

KITE SPREADER WITH EVA COVER

Art. no. 28280

- Stay hooked while going to blind
- Stay hooked in inverted situations
- Easy hooking in & out if wanted
- Less friction on webbing

KITE SPINNING SPREADER

Art. no. 28281

- Rotating kite spreaderbar (lock or free move)
- Stay hooked while going to blind
- Stay hooked in inverted situations
- Easy hooking in & out
- Less friction on webbing

HANDLEPASS SAFETY SYSTEM

Art. no. 69107

- Easy to mount on harness
- Dyneema rope
- Safe QR position

Example

Mounting example

Connect the release loop to the spreaderbar.

Connect the Dyneema rope to the D-ring on the opposite side of where the release loop is attached.

Put the dyneema rope through the ring/or webbing of the Handle Pass Leash.

Then put the rope through the other D-ring on the harness. Now connect the Dyneema rope with the release loop.

'System ready for use,'

In case of emergency pull fast and strong on the release loop.

AMMO BOX WITH WHEELS

Size Art. no.

130 56920

150 56921

- Fits multiple wake/kiteboards and gear
- PVC 840D material
- Top and Bottom compartment
- Inside zipper boundary
- Ventilation mesh
- Detachable shoulder straps
- Address card visor
- Secure straps on inside and outside
- Intergrated wheels
- Front and back handle
- Extra pockets for small gear
- Size: 150 x 43 x 35 and 130 x 43 x 35

Inside Zipper Boundary:

An extra layer with elastic tight rope makes it impossible to get your exclusive gear stuck in the zipper.

GEAR BOX WITH WHEELS

- Big Compartment
- Address card visor
- Intergrated wheels
- Extra pocket for small gear
- Size: 150 x 43 x 35 and 130 x 43 x 35

- Detachable shoulder straps
- Secure straps on outside
- Front and back handle
- For multiple boards and kites

Size	130	150
Art.no.	56922	56923

KITE BOARDBAG PRO WITH WHEELS

Size	135	150
Art.no.	28304	28301

- For multiple boards and kites
- Heavy duty 600D dual-coated polyester canvas
- PVC reinforced sidewalls
- Double 'tight up' straps
- Easy handling
- 3 neoprene carry or pull handles
- Big YKK zipper
- Durable, high density protective PVC bottom

KITE / WAKE BOARDBAG VENOM

- Heavy duty 600D dual-coated polyester canvas
- Lined with 8 mm HPR foam
- Heavy duty zipper
- Shoulder strap
- Carry strap

Size	1.30	1.45	1.55
Art.no.	56925	56926	56927

SURF BOARDBAG VIRUS

- Heavy duty PVC
- Lined with 8 mm HPR foam
- Shoulder strap
- Carry strap
- Fin Opening (8'0" and 9'2")

Size	6'3"	7'3"	8'0"	9'2"
Art.no.	56930	56931	56932	56933

WELDED WETSUITBAG

Art. no. 28318

- Heavy duty 600D dual-coated polyester canvas
- Waterproof material
- Electro welded sealed seams
- Undress carpet (120x100)
- Size: 50 x 40 x 18
- Waterproof zipper
- Adjustable shoulder strap

WETSUITBAG

Art. no. 28316

- Heavy duty 600D dual-coated polyester canvas
- PVC center
- Lined with HPR foam

GEARBAG XXL WITH WHEELS & HANDLE

Art. no. 28311

- Heavy duty 600D dual-coated polyester canvas
- Durable, high density protective PVC bottom
- End pockets and side pockets
- Ergonomic shoulder & carry strap
- Heavy duty zippers
- Dry and wet compartment
- 'Easy to stuff' zipper construction
- Extendable handle
- Integrated wheels
- Size 80 x 45 x 38

GEARBAG XL

Art. no. 28312

- Heavy duty 600D dual-coated polyester canvas
- Durable, high density protective PVC bottom
- End pockets and side pockets
- Ergonomic shoulder & carry strap
- Heavy duty zippers
- Dry and wet compartment
- 'Easy to stuff' zipper construction
- Size 75 x 45 x 38

GEARBAG MEDIUM

Art. no. 28313

- Heavy duty 600D dual-coated polyester canvas
- Durable, high density protective PVC bottom
- End pockets and side pockets
- Ergonomic shoulder & carry strap
- Heavy duty zippers
- Dry and wet compartment
- 'Easy to stuff' zipper construction
- Size 70 x 45 x 35

BACKPACK MEDIUM

Art. no. 28314

- Heavy duty 600D dual-coated polyester canvas
- Durable, high density protective PVC bottom
- Waterproof zippers
- Neoprene carry handle
- Soft padded shoulder straps
- Front side lock strap
- 3 additional side pockets
- Internal mp3, CD player pocket
- Headphone wire excess hole

BACKPACK LARGE

Art. no. 28315

- Heavy duty 600D dual-coated polyester canvas
- Durable, high density protective PVC bottom
- Waterproof zippers
- Neoprene carry handle
- Soft padded shoulder straps
- Front side lock strap
- Internal laptop pocket
- 3 additional side pockets
- Internal mp3, CD player pocket
- Headphone wire excess hole

FINSET ASYMMETRICAL
